DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species 1, claims 5-6 and 24-28, pertaining to a method including forming a gate and crystallizing a semiconductor film with a combination of a heat treatment, a laser or intense light treatment and a promoting material of group 14 elements and removing the promoting material from the surface of the promoting material;

Species 2, claims 7-9 and 42 [note that claims 7 and 42 are improper since they are completely identical claims], pertaining to a method including applying a solution containing a catalytic element and backing a semiconductor film;

Species 3, claims 16-18 and 29-33 pertaining to a method including forming a gate and forming a Ge film by VPD and removing the Ge from the film without changing its shape;

Species 4, claims 20-22 and 34-38, pertaining to a method which does not include a gate, only a Ge layer formed by VPD and further requires subsequent patterning to a crystallized semiconductor film after the removal of Ge to form an island like channel region;

Species 5, claim 40, pertaining to a method which includes forming a gate, a Ge film, heating the semiconductor film and subsequently laser annealing it;

Species 6, claims 43-44, does not require the formation of a gate electrode, nor specifies removing the promoting material from the surface of the crystallized film, however does require patterning the crystallized semiconductor film to form an island.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, there is no generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

A telephone call was made to Eric Robinson on 4/14/04 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 2813

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
